

TITLE

GLASS LAMINATES HAVING IMPROVED STRUCTURAL  
INTEGRITY AGAINST SEVERE STRESSES FOR USE IN EXTERNAL  
PRESSURE PLATE GLAZING APPLICATIONS

5

ABSTRACT OF THE DISCLOSURE

This invention is an architectural glazing  
structure for exterior mounting that is a glass  
laminate having enhanced resistance to being pulled  
from a frame upon being subjected to severe positive  
10 and/or negative pressure loads. This invention is  
particularly suitable for architectural structures  
having windows that can be subjected to the extreme  
conditions prevalent in a hurricane, or window that can  
be placed under severe stress from repeated forceful  
15 blows to the laminate.
